The QUICK and PROFESSIONAL SOLUTION for Man and Woman!
ABOUT SOH

Why „Scalp Optic Hair®“ (“SOH”)?

Thinning hair, hair loss, baldness or bare spots can often lower one’s self-confidence. Not only related to increasing age, but also because of illness, people lose their magnificent head of hair and spend hours in the bathroom trying to hide spots that seem to stand out, or to create an illusion that there is still existing enough hair there. Most disturbing is not only thinning, scarce hair, but bright areas of scalp show-through.
„SOH Roller“ by using an optical method to work against sparsely grown hair spots. The colour of the scalp is adapted to its existing hair, giving it more volume and letting it appear fuller. In some cases, hair growth will be stimulated out of the treatment. You will feel restored and more self-confident after successful treatment, allowing you to rediscover yourself.
Through “SOH-Roller“ treatment, the hair follicles are partially stimulated. Scalp skin is adapted to the existing hair colour.

Scar retouching

A hair transplantation scar is optical adapted to the existing hair colour, resulting in the re-growth look of natural hair.
**APPLICATION**

Optical hair densification

This woman’s scalp is coloured to match to her individual hair colour. The large bright spot without hair growth is completely covered using numberless dots of colour.
As part of a consultation session, all details of the treatment sequence are discussed.

The focus here is on clarifying potential contraindications.

The desired colour is selected.

For SOH baldness treatment, the exact individual method will be discussed in detail and if necessary, a sketching is drawn.
